

# Encryption (non-PKE) Asynchronous Assignment

Presented By:

Christine Marra

Adam Prado

Wayne Tobias

Yenmin Young

Vanessa ZOU (Qianhui)

## Learning Targets:

Today you will....

1. Learn what encryption/decryption is
2. Learn several types of encryption methods
3. Decode encrypted messages

## Success Criteria:

Successfully decode the encrypted messages

Please watch the following videos  
introducing Cryptography

CC

CRASH COURSE COMPUTER SCIENCE

# CRYPTOGRAPHY

CRYPTOGRAPHY

# History of Cryptography P.1

Now you will be given an assortment of messages encrypted with various types of ciphers. Your job is to decrypt each message based on the cipher and the key. Good luck!

# Substitution Ciphers: Caesar Cipher

You receive the following message:

**FRQJUDWXODWLRQV BRX FUDFNHG WKH FRGH**

The letters are not what they seem to be. To decode this message you have to move backwards 3. Decipher the encrypted message using a [cipher wheel](#) and a shift.

Resources and Videos:

- [Virtual Cipher Wheel](#)

# Substitution Ciphers: Pig Pen Cipher

Using the Encryption Key, decipher the following encrypted message.

Encryption Key:

A	B	C	J	K	L
D	E	F	M	N	O
G	H	I	P	Q	R
S			W		
T		U	X	Y	
V			Z		

Further Reading:  
[Pigpen Cipher Reading](#)

# Phone Keypad Cipher

Decipher the following encrypted message.

222 666 6 7 88 8 33 777  
7777 222 444 33 66 222 33  
777 666 222 55 7777

[Phone Keypad Encryption Key](#)

# Permutation Cipher

Decipher the following encrypted message.

**Encryption Clue:** Look real close and you will find,  
to decode this message start with the end in mind.

L	L	A	Y	R
O	F	E	L	P
M	I	S	O	O
T	Y	A	W	S
I	S	I	H	T

# Transposition Cipher

Here is a fun cipher that  
requires logic AND a  
physical object!

Watch from 0:00 to 4:30

Encrypt the message AT FOUR SURVEILLANCE ON ENEMY CAMP using a tabular transposition cipher with encryption keyword MAINE. If necessary, pad the message with A's.

There are 5 letters in MAINE, so we begin by making rows of 5.  
There are 29 total letters. We need 6 rows of 5

1	2	3	4	5
A	T	F	O	U
R	S	U	R	V
E	L	L	E	A
N	C	E	O	N
E	N	E	M	Y
C	A	M	P	A

Now using the keyword MAINE, we order the columns: 2,5,3,1,4

# Monoalphabetic Substitution Cipher (Cryptograms)

Want to try and challenging puzzle? Try this [cryptogram](#)!

Hint: Start with the short words and consider the letter frequency.

[illegible]

# More Ciphers...

There are so many more ciphers used throughout history to encode confidential information. Read more about them [here!](#)

# Answer Key

Caesar Cipher: congratulations you cracked the code

Pigpen Cipher: hello world

Phone Keypad Cipher: computer science rocks

Permutation Cipher: this is way too simple for yall
